### Printing process

A variety of processes can be made, specific can contact customer service

### Hot stamping process

The characteristics of bronzing: clear patterns, beautiful, bright colors, wear resistance, weather resistance. In packaging design, bronzing can play the finishing point, highlight the role of the design theme, the effect is more significant.

### UV technology

UV IS GLITTERING AND TRANSLUCENT LIKE CRYSTAL GET RID OF, GLITTERING AND shining, ALSO HAVE VERY STRONG THREE-DIMENSIONAL FEELING AT THE SAME TIME, THE instant BURST BETWEEN fashion, INDIVIDUAL CHARACTER gives you extraordinary unique enjoyment.

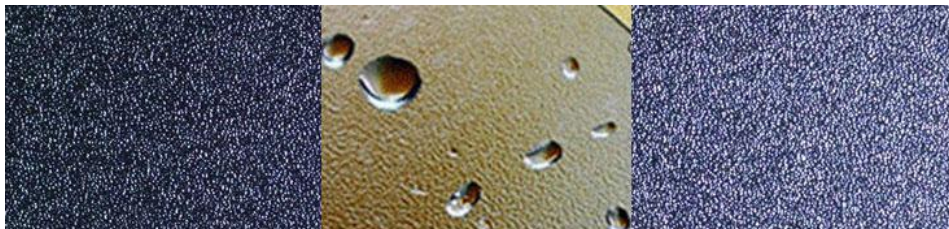

### Embossing process

A concave and convex pattern is formed on the surface of paper or board by means of mechanical embossing or creasing paper. Embossed paper by embossing to improve its decorative effect, make the paper more real texture. Greatly improve the grade of paper.

### Bump process

Embossing and printing all kinds of concave-convex graphics and patterns, showing different shades of patterns, with obvious floating sense, enhance the three-dimensional sense and artistic appeal. Concave - convex embossing is the embossed art of printing, which greatly improves the grade of products.

### Grinding process

The process by which an object with a smooth surface becomes unsmooth, causing light to diffuse on the surface. The surface of the notebook after the abrasive process can

enhance the anti-slip performance, but also can reduce the fingerprint residue.

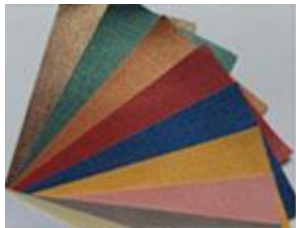

### Hot stamping process

Bronzing process is to use the principle of hot pressing transfer, transfer the aluminum layer of anodized aluminum to the surface of the substrate to form a special metal effect, because the main material used in the bronzing is anodized aluminum foil, so the bronzing is also called anodized hot stamping.

### The material selection

A variety of materials can be made, specific can contact customer service

**Specialty paper**  
Has the special purpose, the output is relatively small
